

BakeGPT

PROBLEM STATEMENT:

Many individuals interested in baking, especially beginners, face difficulties in understanding recipes, selecting suitable ingredients, maintaining correct baking temperatures, and resolving common baking problems such as undercooked cakes or hard cookies. Existing resources like websites and videos often provide generic information and do not offer personalized, real-time assistance. As a result, users spend considerable time searching for solutions from multiple sources. Therefore, there is a need for an intelligent system that can provide instant, accurate, and interactive guidance to help users successfully perform various baking tasks and improve their baking experience.

OBJECTIVES:

- To develop an AI-powered baking assistant that provides instant support for baking-related queries.
- To recommend suitable recipes based on user requirements and available ingredients.
- To suggest ingredient substitutions when certain ingredients are unavailable.
- To provide accurate baking instructions, temperature settings, and timing guidance.
- To assist users in troubleshooting common baking problems and mistakes.
- To enhance the baking experience through personalized and interactive conversations.
- To help beginners learn baking techniques and improve their baking skills efficiently.
